## THE COMPANY

---

SATODEV is a small company specialized in **dependability software**. We are at the service of our customers to **guide** and **advise** them on the choice of modeling techniques, to **train users** on the functionalities brought by the new versions of the software and to **propose an advanced expertise** for the use of the software during complex studies in various fields.

### Our 3 main activities are:

- The development of software for dependability.
- Sales and maintenance of GRIF-Workshop and Cecilia-Workshop software.
- Training on GRIF modules, on Cecilia and on dependability (Fault trees, MBSA models, Petri nets, Markov graphs...).

## OUR TRAININGS

---

Our double competence in dependability and in computer science allows us to offer you theoretical as well as practical training on GRIF and Cecilia tools.

All of our training courses can take place:

- **Intra-company:** on-site training which is carried out in your premises. This training can contain a part specific to your problems.
- **Inter-company:** off-site training which is carried out in the Bordeaux region (GRIF) or in the Toulouse region (Cecilia). In this case, employees from various companies are present. A training in English must be requested at least 2 months before to inform the other participants.
- **Custom-made:** we can work with you to develop a custom-made training program to best meet your needs (face-to-face / distance learning, date, duration, content, etc.).

In order to make the trainings profitable, the number of participants is limited.

Our training courses are certified:

La certification qualité a été délivrée au titre de la catégorie d'action suivante :
